

SAI NIKSHITHA MASTHA

Hyderabad, India — +91 8885433496 — sainikshithamastha396@gmail.com — linkedin.com/in/sainikshitha — github.com/SaiNikshitha

Professional Summary

Computer Science undergraduate with hands-on experience in LLMs, Generative AI, and full-stack development. Proactive and self-driven, with a track record of rapidly applying new technologies to build real-world AI-powered systems. Strong communicator and collaborator, passionate about bridging technical depth with product thinking to deliver impactful solutions.

Education

B.Tech in Computer Science & Engineering

CGPA: 9.0 — 2023–2027

Keshav Memorial Institute of Technology (KMIT), Hyderabad

Intermediate (MPC)

97.5% — 2021–2023

Sri Chaitanya Junior College, Hyderabad

Technical Skills

AI / LLMs: LLMs (ChatGPT, Llama3-8B, Groq, Hugging Face), Generative AI, XGBoost, CNN, Prompt Engineering

Dev: Node.js, Express.js, React.js, FastAPI, Flutter, REST APIs, WebSockets **Languages:** Python, Java, JavaScript

DB: MySQL, MongoDB **Cloud:** AWS, GCP **DevOps:** Docker, Jenkins, Maven, Git, Postman

CS Fundamentals: DSA, OOP, OS, Software Engineering, SDLC, Agile **UI & Analytics:** HTML, CSS, Bootstrap, UI Prototyping

Projects

Agent Monitor — *ChatGPT, Llama3-8B, Groq, XGBoost, Python, Node.js, MongoDB, React.js*

- Built a predictive and secure monitoring framework for multi-agent LLM systems, tracking agent performance, detecting anomalies, and ensuring safe AI collaboration — directly relevant to LLM-based product development.
- Implemented XGBoost-based performance prediction with real-time monitoring and human-in-the-loop control, ensuring error-free agent collaboration and robust output quality.
- Led backend integration and deployment across the full SDLC, from requirements to production, in an agile team environment.

College Canteen App — *Flutter, WebSockets, Node.js, Express.js, MongoDB*

- Developed a digital food ordering platform through iterative, user-driven development cycles, streamlining canteen operations and significantly reducing student waiting time.
- Implemented real-time order tracking, online payments, and push notifications using WebSockets — demonstrating practical UI prototyping and product requirements translation.

AI-Driven Plant Disease Detection System — *Node.js, Express.js, HTML, CSS, JavaScript, REST APIs, CNN*

- Built a web platform integrating a pre-trained Hugging Face CNN model via REST APIs to identify plant diseases — applying AI/ML integration principles to a real-world product workflow.
- Designed clean backend architecture with role-based authentication, image upload workflows, and history tracking — delivering a complete, user-facing product.

Achievements & Activities

- Led backend integration and deployment in collaborative AI-driven projects, managing cross-functional coordination across data, frontend, and AI teams.
